Altamar Foods Corporation believes in the critical role we play in ensuring our products are sourced in ways that consider the protection of harvested species and the health of our oceans for generations to come.

We believe in providing our customers with high quality and healthy seafood options that are sourced sustainably. That is why we are taking important steps to learn and inform our sourcing policies so that we can provide responsible farmed and wild caught seafood options to our partners.

Scientific Name: *Coryphaena hippurus*

Origin: Peru

Capture Zone: FAO 87

Capture Method: Hooks & Lines

Shelf life: 24 months

Conservation: Keep frozen at -18°C

Destination markets: America, Europe, Africa, Asia and Oceania

Nombre científico: *Coryphaena hippurus*

Origen: Perú

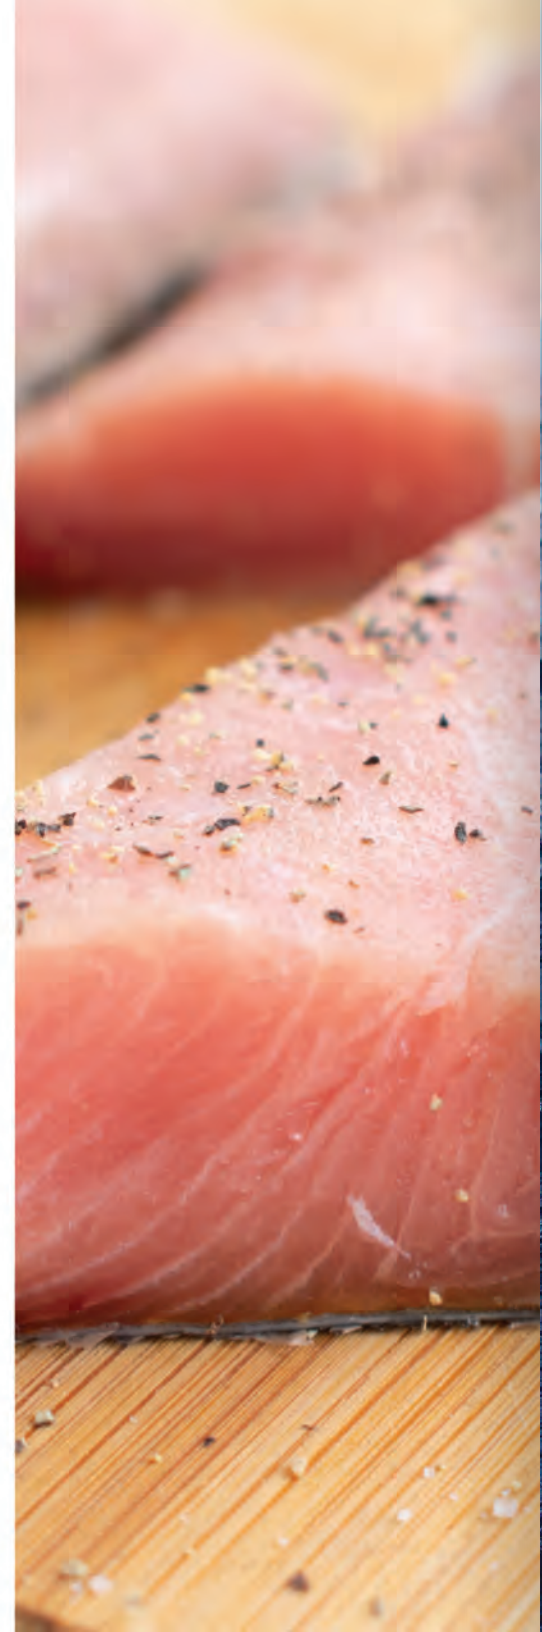

Zona de captura: FAO 87

Método de captura: Anzuelo

Duración: 24 meses

Conservación: Mantener refrigerado -18°C

Destino comercial: América, Europa, África, Asia y Oceanía

We have been a proud FishChoice Supplier Member since 2019. As a FishChoice Supplier Member, our company is part of a seafood community of like-minded businesses, NGOs, and others who are committed to advancing seafood sustainability.

We also signed a Memorandum Of Understanding (MOU) with the World Wildlife Fund (WWF) in Peru to join the Mahi-Mahi FIP in this country. Peru's Mahi Mahi fishery supports 4,200 fishermen and serves as a key link in the marine food chain, providing food for sharks, dolphins, and other ocean predators. It is also a leading source of the world's Mahi Mahi and, like Ecuador, a top exporter to the United States.
